## The Horrifying American Roots of Nazi Eugenics

Historians/History

tags: Holocaust

by **Edwin Black**

*Edwin Black is the author of "IBM and the Holocaust" and "War Against the Weak: Eugenics and America's Campaign to Create a Master Race," from which the following article is drawn.*

Hitler and his henchmen victimized an entire continent and exterminated millions in his quest for a co-called "Master Race."

But the concept of a white, blond-haired, blue-eyed master Nordic race didn't originate with Hitler. The idea was created in the United States, and cultivated in California, decades before Hitler came to power. California eugenicists played an important, although little known, role in the American eugenics movement's campaign for ethnic cleansing.

Eugenics was the racist pseudoscience determined to wipe away all human beings deemed "unfit," preserving only those who conformed to a Nordic stereotype. Elements of the philosophy were enshrined as national policy by forced sterilization and segregation laws, as well as marriage restrictions, enacted in twenty-seven states. In 1909, California became the third state to adopt such laws. Ultimately, eugenics practitioners coercively sterilized some 60,000 Americans, barred the marriage of thousands, forcibly segregated thousands in "colonies," and persecuted untold numbers in ways we are just learning. Before World War II, nearly half of coercive sterilizations were done in California, and even after the war, the state accounted for a third of all such surgeries.

California was considered an epicenter of the American eugenics movement. During the Twentieth Century's first decades, California's eugenicists included potent but little known race scientists, such as Army venereal disease specialist Dr. Paul Popenoe, citrus magnate and Polytechnic benefactor Paul Gosney, Sacramento banker Charles M. Goethe, as well as members of the California State Board of Charities and Corrections and the University of California Board of Regents.

Eugenics would have been so much bizarre parlor talk had it not been for extensive financing by corporate philanthropies, specifically the Carnegie Institution, the Rockefeller Foundation and the Harriman railroad fortune. They were all in league with some of America's most respected scientists hailing from such prestigious universities as Stanford, Yale, Harvard, and Princeton. These academicians espoused race theory and race science, and then faked and twisted data to serve eugenics' racist aims.

Stanford president David Starr Jordan originated the notion of "race and blood" in his 1902 racial epistle "Blood of a Nation," in which the university scholar declared that human qualities and conditions such as talent and poverty were passed through the blood.

In 1904, the Carnegie Institution established a laboratory complex at Cold Spring Harbor on Long Island that stockpiled millions of index cards on ordinary Americans, as researchers carefully plotted the removal of families, bloodlines and whole peoples. From Cold Spring Harbor, eugenics advocates agitated in the legislatures of America, as well as the nation's social service agencies and associations.

The Harriman railroad fortune paid local charities, such as the New York Bureau of Industries and Immigration, to seek out Jewish, Italian and other immigrants in New York and other crowded cities and subject them to deportation, trumped up confinement or forced sterilization.

The Rockefeller Foundation helped found the German eugenics program and even funded the program that Josef Mengele worked in before he went to Auschwitz.

Much of the spiritual guidance and political agitation for the American eugenics movement came from California's quasi-autonomous eugenic societies, such as the Pasadena-based Human Betterment Foundation and the California branch of the American Eugenics Society, which coordinated much of their activity with the Eugenics Research Society in Long Island. These organizations--which functioned as part of a closely-knit network--published racist eugenic newsletters and pseudoscientific journals, such as *Eugenical News* and *Eugenics*, and propagandized for the Nazis.

Eugenics was born as a scientific curiosity in the Victorian age. In 1863, Sir Francis Galton, a cousin of Charles Darwin, theorized that if talented people only married other talented people, the result would be measurably better offspring. At the turn of the last century, Galton's ideas were imported into the United States just as Gregor Mendel's principles of heredity were rediscovered. American eugenic advocates believed with religious fervor that the same Mendelian concepts determining the color and size of peas, corn and cattle also governed the social and intellectual character of man.

In an America demographically reeling from immigration upheaval and torn by post-Reconstruction chaos, race conflict was everywhere in the early twentieth century. Elitists, utopians and so-called "progressives" fused their smoldering race fears and class bias with their desire to make a better world. They reinvented Galton's eugenics into a repressive and racist ideology. The intent: populate the earth with vastly more of their own socio-economic and biological kind--and less or none of everyone else.

The superior species the eugenics movement sought was populated not merely by tall, strong, talented people. Eugenicists craved blond, blue-eyed Nordic types. This group alone, they believed, was fit to inherit the earth. In the process, the movement intended to subtract emancipated Negroes, immigrant Asian laborers, Indians, Hispanics, East Europeans, Jews, dark-haired hill folk, poor people, the infirm and really anyone classified outside the gentrified genetic lines drawn up by American raceologists.

How? By identifying so-called "defective" family trees and subjecting them to lifelong segregation and sterilization programs to kill their bloodlines. The grand plan was to literally wipe away the reproductive capability of those deemed weak and inferior--the so-called "unfit." The eugenicists hoped to neutralize the viability of 10 percent of the population at a sweep, until none were left except themselves.

Eighteen solutions were explored in a Carnegie-supported 1911 "Preliminary Report of the Committee of the Eugenic Section of the American Breeder's Association to Study and to Report on the Best Practical Means for Cutting Off the Defective Germ-Plasm in the Human Population." Point eight was euthanasia.

The most commonly suggested method of eugenicide in America was a "lethal chamber" or public locally operated gas chambers. In 1918, Popenoe, the Army venereal disease specialist during World War I, co-wrote the widely used textbook, *Applied Eugenics*, which argued, "From an historical point of view, the first method which presents itself is execution... Its value in keeping up the standard of the race should not be underestimated." *Applied Eugenics* also devoted a chapter to "Lethal Selection," which operated "through the destruction of the individual by some adverse feature of the environment, such as excessive cold, or bacteria, or by bodily deficiency."

Eugenic breeders believed American society was not ready to implement an organized lethal solution. But many mental institutions and doctors practiced improvised medical lethality and passive euthanasia on their own. One institution in Lincoln, Illinois fed its incoming patients milk from tubercular cows believing a eugenically strong individual would be immune. Thirty to forty percent annual death rates resulted at Lincoln. Some doctors practiced passive eugenicide one newborn infant at a time. Others doctors at mental institutions engaged in lethal neglect.

Nonetheless, with eugenicide marginalized, the main solution for eugenicists was the

rapid expansion of forced segregation and sterilization, as well as more marriage restrictions. California led the nation, performing nearly all sterilization procedures with little or no due process. In its first twenty-five years of eugenic legislation, California sterilized 9,782 individuals, mostly women. Many were classified as "bad girls," diagnosed as "passionate," "oversexed" or "sexually wayward." At Sonoma, some women were sterilized because of what was deemed an abnormally large clitoris or labia.

In 1933 alone, at least 1,278 coercive sterilizations were performed, 700 of which were on women. The state's two leading sterilization mills in 1933 were Sonoma State Home with 388 operations and Patton State Hospital with 363 operations. Other sterilization centers included Agnews, Mendocino, Napa, Norwalk, Stockton and Pacific Colony state hospitals.

Even the United States Supreme Court endorsed aspects of eugenics. In its infamous 1927 decision, Supreme Court Justice Oliver Wendell Holmes wrote, "It is better for all the world, if instead of waiting to execute degenerate offspring for crime, or to let them starve for their imbecility, society can prevent those who are manifestly unfit from continuing their kind.... Three generations of imbeciles are enough." This decision opened the floodgates for thousands to be coercively sterilized or otherwise persecuted as subhuman. Years later, the Nazis at the Nuremberg trials quoted Holmes's words in their own defense.

Only after eugenics became entrenched in the United States was the campaign transplanted into Germany, in no small measure through the efforts of California eugenicists, who published booklets idealizing sterilization and circulated them to German officials and scientists.

Hitler studied American eugenics laws. He tried to legitimize his anti-Semitism by medicalizing it, and wrapping it in the more palatable pseudoscientific facade of eugenics. Hitler was able to recruit more followers among reasonable Germans by claiming that science was on his side. While Hitler's race hatred sprung from his own mind, the intellectual outlines of the eugenics Hitler adopted in 1924 were made in America.

During the '20s, Carnegie Institution eugenic scientists cultivated deep personal and professional relationships with Germany's fascist eugenicists. In *Mein Kampf*, published in 1924, Hitler quoted American eugenic ideology and openly displayed a thorough knowledge of American eugenics. "There is today one state," wrote Hitler, "in which at least weak beginnings toward a better conception [of immigration] are noticeable. Of course, it is not our model German Republic, but the United States."

Hitler proudly told his comrades just how closely he followed the progress of the American eugenics movement. "I have studied with great interest," he told a fellow Nazi, "the laws of several American states concerning prevention of reproduction by people whose progeny would, in all probability, be of no value or be injurious to the racial stock."

Hitler even wrote a fan letter to American eugenic leader Madison Grant calling his race-based eugenics book, *The Passing of the Great Race* his "bible."

Hitler's struggle for a superior race would be a mad crusade for a Master Race. Now, the

American term "Nordic" was freely exchanged with "Germanic" or "Aryan." Race science, racial purity and racial dominance became the driving force behind Hitler's Nazism. Nazi eugenics would ultimately dictate who would be persecuted in a Reich-dominated Europe, how people would live, and how they would die. Nazi doctors would become the unseen generals in Hitler's war against the Jews and other Europeans deemed inferior. Doctors would create the science, devise the eugenic formulas, and even hand-select the victims for sterilization, euthanasia and mass extermination.

During the Reich's early years, eugenicists across America welcomed Hitler's plans as the logical fulfillment of their own decades of research and effort. California eugenicists republished Nazi propaganda for American consumption. They also arranged for Nazi scientific exhibits, such as an August 1934 display at the L.A. County Museum, for the annual meeting of the American Public Health Association.

In 1934, as Germany's sterilizations were accelerating beyond 5,000 per month, the California eugenics leader C. M. Goethe upon returning from Germany ebulliently bragged to a key colleague, "You will be interested to know, that your work has played a powerful part in shaping the opinions of the group of intellectuals who are behind Hitler in this epoch-making program. Everywhere I sensed that their opinions have been tremendously stimulated by American thought....I want you, my dear friend, to carry this thought with you for the rest of your life, that you have really jolted into action a great government of 60 million people."

That same year, ten years after Virginia passed its sterilization act, Joseph DeJarnette, superintendent of Virginia's Western State Hospital, observed in the *Richmond Times-Dispatch*, "The Germans are beating us at our own game."

More than just providing the scientific roadmap, America funded Germany's eugenic institutions. By 1926, Rockefeller had donated some \$410,000 -- almost \$4 million in 21st-Century money -- to hundreds of German researchers. In May 1926, Rockefeller awarded \$250,000 to the German Psychiatric Institute of the Kaiser Wilhelm Institute, later to become the Kaiser Wilhelm Institute for Psychiatry. Among the leading psychiatrists at the German Psychiatric Institute was Ernst Rüdin, who became director and eventually an architect of Hitler's systematic medical repression.

Another in the Kaiser Wilhelm Institute's eugenic complex of institutions was the Institute for Brain Research. Since 1915, it had operated out of a single room. Everything changed when Rockefeller money arrived in 1929. A grant of \$317,000 allowed the Institute to construct a major building and take center stage in German race biology. The Institute received additional grants from the Rockefeller Foundation during the next several years. Leading the Institute, once again, was Hitler's medical henchman Ernst Rüdin. Rüdin's organization became a prime director and recipient of the murderous experimentation and research conducted on Jews, Gypsies and others.

Beginning in 1940, thousands of Germans taken from old age homes, mental institutions and other custodial facilities were systematically gassed. Between 50,000 and 100,000 were eventually killed.

Leon Whitney, executive secretary of the American Eugenics Society declared of Nazism, "While we were pussy-footing around...the Germans were calling a spade a spade."

A special recipient of Rockefeller funding was the Kaiser Wilhelm Institute for Anthropology, Human Heredity and Eugenics in Berlin. For decades, American eugenicists had craved twins to advance their research into heredity. The Institute was now prepared to undertake such research on an unprecedented level. On May 13, 1932, the Rockefeller Foundation in New York dispatched a radiogram to its Paris office: JUNE MEETING EXECUTIVE COMMITTEE NINE THOUSAND DOLLARS OVER THREE YEAR PERIOD TO KWG INSTITUTE ANTHROPOLOGY FOR RESEARCH ON TWINS AND EFFECTS ON LATER GENERATIONS OF SUBSTANCES TOXIC FOR GERM PLASM.

At the time of Rockefeller's endowment, Otmar Freiherr von Verschuer, a hero in American eugenics circles, functioned as a head of the Institute for Anthropology, Human Heredity and Eugenics. Rockefeller funding of that Institute continued both directly and through other research conduits during Verschuer's early tenure. In 1935, Verschuer left the Institute to form a rival eugenics facility in Frankfurt that was much heralded in the American eugenic press. Research on twins in the Third Reich exploded, backed up by government decrees. Verschuer wrote in *Der Erbarzt*, a eugenic doctor's journal he edited, that Germany's war would yield a "total solution to the Jewish problem."

Verschuer had a long-time assistant. His name was Josef Mengele. On May 30, 1943, Mengele arrived at Auschwitz. Verschuer notified the German Research Society, "My assistant, Dr. Josef Mengele (M.D., Ph.D.) joined me in this branch of research. He is presently employed as Hauptsturmführer [captain] and camp physician in the Auschwitz concentration camp. Anthropological testing of the most diverse racial groups in this concentration camp is being carried out with permission of the SS Reichsführer [Himmler]."

Mengele began searching the boxcar arrivals for twins. When he found them, he performed beastly experiments, scrupulously wrote up the reports and sent the paperwork back to Verschuer's institute for evaluation. Often, cadavers, eyes and other body parts were also dispatched to Berlin's eugenic institutes.

Rockefeller executives never knew of Mengele. With few exceptions, the foundation had ceased all eugenic studies in Nazi-occupied Europe before the war erupted in 1939. But by that time the die had been cast. The talented men Rockefeller and Carnegie financed, the institutions they helped found, and the science it helped create took on a scientific momentum of their own.

After the war, eugenics was declared a crime against humanity--an act of genocide. Germans were tried and they cited the California statutes in their defense. To no avail. They were found guilty.

However, Mengele's boss Verschuer escaped prosecution. Verschuer re-established his connections with California eugenicists who had gone underground and renamed their crusade "human genetics." Typical was an exchange July 25, 1946 when Popenoe wrote Verschuer, "It was indeed a pleasure to hear from you again. I have been very anxious about my colleagues in Germany.... I suppose sterilization has been discontinued in Germany?" Popenoe offered tidbits about various American eugenic luminaries and then sent various eugenic publications. In a separate package, Popenoe sent some cocoa, coffee and other goodies.

Verschuer wrote back, "Your very friendly letter of 7/25 gave me a great deal of pleasure and you have my heartfelt thanks for it. The letter builds another bridge between your and my scientific work; I hope that this bridge will never again collapse but rather make possible valuable mutual enrichment and stimulation."

Soon, Verschuer once again became a respected scientist in Germany and around the world. In 1949, he became a corresponding member of the newly formed American Society of Human Genetics, organized by American eugenicists and geneticists.

In the fall of 1950, the University of Münster offered Verschuer a position at its new Institute of Human Genetics, where he later became a dean. In the early and mid-1950s, Verschuer became an honorary member of numerous prestigious societies, including the Italian Society of Genetics, the Anthropological Society of Vienna, and the Japanese Society for Human Genetics.

Human genetics' genocidal roots in eugenics were ignored by a victorious generation that refused to link itself to the crimes of Nazism and by succeeding generations that never knew the truth of the years leading up to war. Now governors of five states, including California have issued public apologies to their citizens, past and present, for sterilization and other abuses spawned by the eugenics movement.

Human genetics became an enlightened endeavor in the late twentieth century. Hard-working, devoted scientists finally cracked the human code through the Human Genome Project. Now, every individual can be biologically identified and classified by trait and ancestry. Yet even now, some leading voices in the genetic world are calling for a cleansing of the unwanted among us, and even a master human species.

There is understandable wariness about more ordinary forms of abuse, for example, in denying insurance or employment based on genetic tests. On October 14, America's first genetic anti-discrimination legislation passed the Senate by unanimous vote. Yet because genetics research is global, no single nation's law can stop the threats.

**Dr. Angelito Infinito - 6/19/2010**

Just see this page for more links showing nexus between NAZI's and BigPigPharma

<http://MercuryJustice.org>**Caz tasker - 8/13/2009**

Eugenics is back, being instituted in UK schools and elsewhere via the 'Teens and Toddlers Sustainability Replication Programme' now in many schools across the UK, as well as 'Perfecting Eugene' and 'The Designer Baby Dilemma'.

Evidence for this is at this youtube video 'Ark Schools, Academies and Eugenics':

[http://www.youtube.com/watch?v=RBxQpft5F\\_k](http://www.youtube.com/watch?v=RBxQpft5F_k)

**Larry Lau - 12/1/2004**

I must disagree on your point about sane eugenicists/geneticists. Although breeding in any species usually results in offspring who fit in the middle of their species profundity - the goal of eugenics was not the immediate betterment of the human race, but rather the long term benefit. To this end, they would have cited Darwin who pointed out that compounding similar characteristics through mating over an extended period of time would have indeed resulted in a change in where the mean of that species was. To this end, eugenicists would have desired the mating of only individuals who existed in a certain high percentile of the species. Therefore, eugenics from this statistical view was indeed "sane"

-- refer to Glaton, "The possible improvement of the human race" in Essays in Eugenics (1909)

**Dave West - 12/13/2003**

Josh, et al.

Yeah, not exactly. Eugenics is breeding (artificial selection) in the human genepool (so happens my profession is plant breeding, so it tends to be from that perspective that I reflect on these matters).

Perhaps I can illustrate my point with a bit of arcane history.

From:

THE STORY OF JAMAICA by CLINTON V. BLACK 1958 p.105

ISBN 0 00 329345 9

"Coromantees were as a race strong, proud and fierce and were not easily broken to gang labour. They made up the majority of the Maroons and almost every slave revolt was led by Coromantees. The Eboes, on the other hand, had for ages been enslaved in Africa by stronger tribes and were, as a result, docile and rather sad by nature. The women, particularly, made good and willing field labourers."

Certain aspects of contemporary social policy bear a vague (and perhaps not so vague) resemblance to breeding projects. Talk among yourselves.

**Jonathan Dresner - 12/8/2003**

Mr. Greenland,

The source of your quotation is none other than Karl Marx. In his history *The Eighteenth Brumaire of Louis Bonaparte*, he wrote "Hegel says somewhere that all great events and personalities in world history reappear in one fashion or another. He forgot to add: the first time as tragedy, the second as farce."

As far as I know, nobody has actually identified the Hegel citation in question, though.

But I don't really think that's what Dave West was trying to say, exactly.

**Josh Greenland - 12/8/2003**

eom

**Josh Greenland - 12/8/2003**

I don't know who said that, but that seems to sum up your point about how things taken on a different guise the second time around.

I'm told that humans genetically tend to reproduce toward a middle in abilities. Getting two geniuses to mate won't necessarily result in a super-genius, nor two retarded people in a vegetable. I understand that in either case their offspring will tend toward some mean

("normal") level of human intelligence (insofar as intelligence is even measurable). So if some historians have been complicit with the eugenicists, sane, ethical geneticists haven't been.

#### **Dave West - 12/6/2003**

One gets the impression people expect things to come in the same guise and be recognizable the next time. But once we have a word for it, it has to alter its form. We now have "genocide" and "holocaust" and "jackboot" so the new incarnation will be "kinder and gentler," shirts blue, not brown. Likewise, it's not necessary to gas the diploid, just warehouse them during the most procreative years to remove their recalcitrant alleles from the population. In time the result is ensured: a docile class of worker cattle. We'll need a rationale. Let's see: how 'bout a non-conforming choice of relaxant. Their approach was, after all, as legal as ours, or for that matter, the Inquisition's.

#### **Elia Markell - 11/29/2003**

Good point SMS.

What might forestall the development you fear would be if the debate on American eugenics would include more prominently the fact that it was popular with progressives and was not, or not only, the province of right-wing xenophobes. Feminist idol Margaret Sanger is only the most glaring of those progressives who fused seamlessly their faith in a socially efficient, "progressive" and scientifically planned future with the drive to eliminate inferior stocks.

The very organization you name, the National Council of the Social Studies, is the bastion of a progressive educational ideology that has its roots in this elitist utopianism. The fact that today NCSS celebrates multiculturalism and a more universalistic egalitarianism should not fool anyone. The same elitism is there, if not the eugenics, along with the same stress on using social studies knowledge as a means of social control instead of as substantive intellectual training.

You mention Facing History and Ourselves, and you are correct. At NCSS, Holocaust education has very largely been hijacked to serve the purposes of beating up on the West, the U.S. in particular. It does this by focusing on the Holocaust as a simple instance of "fear of the Other," of which all the other instances turn out to be the U.S.'s or the West's responsibility (slavery, Native American slaughters, even the comparatively mild Japanese-American internment of World War II.) Meanwhile, amid all the NCSS conference sessions on Islam designed to teach tolerance toward Muslims (there must have been ten or so at this last conference), not one has yet dealt with the vile, Nazi-inspired anti-Semitism rampant in the Islamic world. Nor were there any sessions on rising anti-Semitism in Europe. As a Jew, I find myself wondering what the social studies profession's Holocaust obsession is worth to Jews today, who are increasingly worried about the next Holocaust now looming on the horizon.

A careful look at American eugenics would also entail a careful reassessment of the elitism and hostility toward the downtrodden embedded in past progressive thinking and still embedded now in liberal condescension. If this happens, the studying of this movement could well merit support.

#### **Jonathan Dresner - 11/26/2003**

Mr. Adams,

Of course there are differences, and even a devout multiculturalist like myself has preferences.

But claims of superiority must be made very carefully. And the biological race-nation concept is deeply flawed (i.e. wrong) as an analytic or proscriptive tool. Genetic "improvement" is begging for unintended consequences, either in the form of losing important skills and contributions from "flawed" individuals or in the form of creating "better" people with new and different flaws (not the least of which is the belief that they are better).

Differences can be ascribed to many things, but ascribing differences between societies to purely genetic causes is simplistic. I'd call it silly, if the implications weren't so horrific.

#### **Art Adams - 11/26/2003**

Of course you are right - left, no, right.

There is really no such thing as eugenics, natural selection, or biological science. They are delusions of the dominant race. Just as there is no such thing as any substantive difference between Western science, technology, ethics, or governmental systems and the Other. And there is no difference between Iowa and Mexico, or Colorado and Haiti, or Maine and Cambodia...

#### **Grant Jones - 11/26/2003**

Do a google search for "utilitarian bioethics."

Grant Jones - 11/26/2003

Let's not forget the collectivism of such European thinkers as Comte.

SMS - 11/26/2003

This is an important book, although much of the story has been familiar to scholars for decades (especially those who have worked on the immigration restriction movement of the World War I era).

The potential tragedy is that this part of the very complex story of the rise of racial eugenics will be twisted by ideologues into claiming that the US was responsible for the Holocaust. The vastly more important role of European and German historical anti-Semitism and the almost universal appeal of "scientific" racism and nationalism in the late 19th and early 20th centuries will be forgotten in the rush say it's all America's fault. This germ has already been planted in materials used by Facing History and Ourselves and it's hard to imagine that the National Council for the Social Studies will be far behind.

Bernard J. Wolfe, Jr. - 11/26/2003

I would refer the author of this story and others to a website, <http://www.bjwolfejr.com> which raises questions about the continued use of the healthcare system to harass and injure dissidents or persons considered of inferior genetic makeup. The report is quite complicated with many links to copies of extensive corroborative medical records.

Jonathan Dresner - 11/24/2003

The most glaring gap in this article is the leap from mid-19th century European Darwinism to 20th-century American eugenicism: my World History students know (after I tell them, every year) that the link between them is the Social Darwinism of Herbert Spencer, bolstered by historical tracts treating "nations" (particularly the nations of Europe) as if they were discreet entities.

Combining the Hegelian stage theory of historical development, and an enlightenment certainty in linear progress, with racialism created the rationalization for treating the northern European peoples as superior: they reached the industrial stage first (the first time they'd ever gotten to a new stage first, but that's not something they noticed), so they must be better. Other societies were classified based on the "earlier" stage at which they were "stuck": anthropology and area studies grew enormously in the 19th century and early 20th century and were heavily dependent on stage and nation-race theories.

So eugenics is not a linear result of Darwinism, or a purely medical pseudoscience: it passes from biology through the social sciences before it comes back to medicine again.
